

It's time to be water wise because every drop counts

Did you know?

Up to 16% of all household water is flushed down the toilet!
Don't flush needlessly - use your toilet's **half flush** option.

Toilet Tips

- *Never flush items other than toilet paper down the toilet.*
- *Replace your older-style toilet suite with a 4-star WELS Scheme dual-flush system. This can save up to 8 litres of water with every flush.*
- *Use tank water to flush. Talk to your plumber about having your rainwater tank internally plumbed to your toilet.*
- *Check for leaks by putting a little food colouring in the cistern. If the colouring begins to appear in the bowl without flushing, have the cistern rubber repaired immediately. Flush as soon as the test has been completed, so as not to stain the bowl!*
